Air Monitoring Started Near Sterigenics Facility in Willowbrook, Ill.

Key Message: Region 5 and OAQPS will be monitoring near the Sterigenics facility to better understand the levels of ethylene oxide in the air.

Samples will be collected every three days, over a 24-hour timeframe, for three months. Data from these monitors will be available approximately 21 days after the air samples are collected and processed by the laboratory. This monitoring data will help inform a risk assessment, which is expected to be completed in spring 2019.
